RV Connector Cable ASPRV25

Recharge RVs & Trailers

Charge your RVs and trailers without the need of additional batteries and accessories.

This invaluable cable has a standard 2-pin SAE connector on one end and a 7-way blade connector on the other end. It connects as easily as plugging a trailer to a car end during travel. This allows solar generators to charge the batteries of motor homes and trailers directly without the hassle of configuring extra batteries and battery packs.

This cable can plug in directly to the SAE pocket on the output panel on the back of ASP 300 and ASP 360 systems. Enjoy the ultimate in plug & play experiences during camping and off-grid living.

Replace gasoline generators with responsible solar power. No fuel storage or transportation, no fumes, no carbon monoxide, no fire hazard, no noise issues with neighbours, RV parks, park rangers, or wildlife.

Suitable for any vehicle with a 7-way towing connection, including trailers, RVs, horse trailers, mobile disaster relief vehicles, and concession or catering trailers.

Specifications	RV Connector Cable, 25'
Cable Length	25 feet (7.62 m)
Connectors	Standard 2-pin SAE and 7-way blade connector (car/vehicle end)
